

114TH CONGRESS
1ST SESSION

H. RES. 398

Recognizing that access to hospitals and other health care providers for patients in rural areas of the United States is essential to the survival and success of communities in the United States.

IN THE HOUSE OF REPRESENTATIVES

JULY 29, 2015

Ms. JENKINS of Kansas (for herself and Mr. WELCH) submitted the following resolution; which was referred to the Committee on Energy and Commerce

RESOLUTION

Recognizing that access to hospitals and other health care providers for patients in rural areas of the United States is essential to the survival and success of communities in the United States.

Whereas access to quality health care services determines whether individuals in the United States can remain in the communities they call home and whether their children will return to those communities to raise families of their own;

Whereas more than 60,000,000 individuals in rural areas of the United States rely on rural hospitals and other providers as critical access points to health care;

Whereas rural areas of the United States need quality health care services to attract and retain business and industry;

Whereas, to ensure that communities in the United States survive and flourish, Congress must address the unique health care needs of individuals in rural areas of the United States;

Whereas individuals in rural areas of the United States are, per capita, older, poorer, and sicker than individuals in urban areas of the United States;

Whereas, according to the Department of Health and Human Services, “rural areas have higher rates of poverty, chronic disease, and uninsurance, and millions of rural Americans have limited access to a primary care provider”;

Whereas, according to the Department of Agriculture, individuals in rural areas of the United States have higher rates of age-adjusted mortality, disability, and chronic disease than individuals in urban areas of the United States;

Whereas the 19.3 percent of the population of the United States that lives in rural areas is scattered over 95 percent of the landmass of the United States;

Whereas the geography and weather of rural areas of the United States can make accessing health care difficult, and cultural, social, and language barriers compound rural health challenges;

Whereas individuals in rural areas of the United States are more likely to be uninsured and more likely to receive coverage through public sources than individuals in urban areas of the United States;

Whereas the proportion of uninsured and underinsured individuals is rising faster in rural areas of the United States than in urban areas of the United States;

Whereas access to health care continues to be a major challenge in rural areas of the United States, as—

(1) 97 percent of the 2,041 rural counties in the United States are designated as primary care Health Professional Shortage Areas (commonly referred to as “HPSAs”);

(2) rural areas of the United States have 31-percent fewer primary care physicians per 100,000 people as urban areas of the United States; and

(3) more than 40 percent of patients in rural areas of the United States travel at least 20 miles to receive specialty medical care, compared to only 3 percent of patients in urban areas of the United States;

Whereas, because rural hospitals and other providers face unique challenges in administering care to patients, Congress has traditionally supported those providers by implementing—

(1) specific programs to address rural hospital closures that occurred in the 1980s by providing financial support to hospitals that are geographically isolated and in which Medicare patients make up a significant percentage of hospital inpatient days or discharges; and

(2) a program established in 1997 to support limited-service hospitals that, being located in rural areas of the United States that cannot support a full-service hospital, are critical access points to health care for rural patients;

Whereas hospitals in rural areas of the United States achieve high levels of performance, according to standards for quality, patient satisfaction, and operational efficiency, for the types of care most relevant to rural communities;

Whereas, in addition to the vital care that rural health care providers provide to patients, rural health care providers are critical to the local economies of their communities and are one of the largest types of employers in rural areas of the United States where, on average, 10 to 15 percent of total employment impact is attributed to the health sector;

Whereas a hospital in a rural area of the United States is typically one of the top 2 largest employers in that area;

Whereas 1 primary care physician in a rural community annually generates approximately \$1,400,000 in wages, salaries, and benefits, and 1 general surgeon in a rural community annually generates approximately \$1,400,000 in wages, salaries, and benefits and \$2,700,000 in total revenues;

Whereas the average critical access hospital, a limited-service rural health care facility, creates 195 jobs and annually generates \$8,400,000 in wages, salaries, and benefits, and the wages, salaries, and benefits provided by a critical access hospital can amount to 20 percent of the output of a rural community's economy;

Whereas hospitals in rural communities play a vital role in caring for the residents of those communities and preserving the special way of life that communities in the United States foster; and

Whereas the closure of a hospital in a rural community often results in severe economic decline in the community and the departure of physicians, nurses, pharmacists, and other health providers from the community, and forces patients to travel long distances for care or to delay receiving care, leading to decreased health outcomes, higher

costs, and added burden to patients: Now, therefore, be it

1 *Resolved*, That the House of Representatives—

2 (1) recognizes that access to hospitals and other
3 health care providers for patients in rural areas of
4 the United States is essential to the survival and
5 success of communities in the United States;

6 (2) recognizes that preserving and strength-
7 ening access to quality health care in rural areas of
8 the United States is crucial to the success and pros-
9 perity of the United States;

10 (3) recognizes that strengthening access to hos-
11 pitals and other health care providers for patients in
12 rural areas of the United States makes Medicare
13 more cost-effective and improves health outcomes for
14 patients;

15 (4) recognizes that, in addition to the vital care
16 that rural health care providers provide to patients,
17 rural health care providers are integral to the local
18 economies and are one of the largest types of em-
19 ployers in rural areas of the United States; and

20 (5) celebrates the many dedicated medical pro-
21 fessionals across the United States who work hard
22 each day to deliver quality care to the nearly 1 in
23 5 people in the United States living in rural areas,
24 because the dedication and professionalism of those

1 medical professionals preserves the special way of
2 life and sense of community enjoyed and cherished
3 by individuals in rural areas of the United States.
